ICT Project

Project Title:
Business Website Development Using HTML, CSS, and JavaScript

Objective:

Create a multi-page static website for a business of your choice.

- Choose a business theme (examples include a café, digital marketing agency, travel agency, fitness center, etc.).
- The website should be at least three pages, including a homepage, a services/products page, and a contact page.

Group Guidelines

- **Group Size: A maximum of 3 students per group.**
- **Cross-Section Policy: No cross-section groups allowed.**
- **Roll Number Submission: Ensure to include your roll number in every submission.**
- **Single Submission: Only one member of the group should submit the entire project.**
- **Integration: The final submission must include all files integrated together.**

Important Notice

Any group found copying the project from another group or any external source will receive an F grade in the lab. Both groups will be penalized. All projects from different sections will be evaluated by a single panel committee, including course and lab instructors, who will assess the quality of code and check for plagiarism.

Deadlines:

Submission Guidelines:

- **First Deliverable: Basic HTML structure and initial design, due within 15 days.**
- **Final Deliverable: Complete project with all pages and functionalities, due before the final exam period.**

- **Project Proposal Submission:**
  - **Deadline:20 November 2024**
- **Viva and Presentation Date:**
  - **Date: 03 December 2024**

Project Task Overview

"Create a Business-Related Website"

Phase 1: Planning and Design

1. **Requirement Gathering and Analysis**
   - Research project requirements to define website scope.
   - Define user stories to capture user needs and expectations.
2. **Design and Wireframing**
   - Develop a wireframe for the Home, Services/Products, About, and Contact pages or any other you want.

Phase 2: Development

1. Setting up the Project Environment
   - Organize folders (css/, js/, images/) and set up tools for development.
2. Implementing Frontend Components
   - Develop components for each page:
     - Homepage: Welcome message, navigation bar.
     - Services/Products Page: List services/products with images.
     - About Page: Company information.
     - Contact Page: Contact form and bonus marks for Google Maps (optional).

Phase 3: Testing and Deployment

Testing and Quality Assurance

1. Conduct comprehensive testing for:
    - Functionality
    - Usability
    - Responsiveness
    - Cross-browser compatibility
2. Perform security checks to ensure secure authentication and data privacy.
3. Debug and fix any issues identified during testing.

Documentation and Presentation

- **Create thorough documentation detailing:**
    - Project requirements
    - Design
    - Implementation
    - Testing procedures
- **Prepare a presentation showcasing:**
    - Project features
    - Functionalities
    - User experience

Tools and Technologies

HTML (HyperText Markup Language)

- Creating Structure:
    - Use HTML5 Doctype: <!DOCTYPE html>
    - Define the basic structure: <html>, <head>, <title>, <body>
- Semantic Elements:
    - Employ semantic tags like <header>, <footer>, <nav>, <section>, and <article> for better structure and meaning.
    - Use elements to structure and contain all sections of each page to ensure organized and responsive layout.

CSS (Cascading Style Sheets)

- Basic Styling:

- Select elements using tag names, classes (.class-name), or IDs (#element-id).
- Apply styles using properties like color, font-size, margin, padding, background, etc.

- Selectors and Properties:
  - Use different selectors (element, class, ID) to target specific elements and apply properties for layout, typography, colors, and spacing.

JavaScript

- Implement JavaScript to dynamically update the content of web pages.
- Ensure relevant information is displayed or modified based on user interactions, providing a seamless and responsive interface.

Presentation Guidelines

- **Prepare a well-organized presentation/slideshow that includes:**
  - **Introduction**
  - **Project Description**
  - **Screenshots of the Website**

Happy Coding!
